

GD-LF-BT1150D-IR

1/1.8" Lens 11~50mm DC 4K IR

- The IR corrected mega-pixel lens has a focal length range of 11 to 50 mm, which covers a horizontal angle of 38.1 ° to 9 ° with a 1 / 1.8-inch camera. With the varifocal lens you can image scenes in wide angle as well as tele, day and night, without compromising on resolution.
- A new optical design uses glass lens elements and a special optical coating that ensures 4K (8MP) high resolution even under IR light.
- The DC Iris drive of this series allows a precise adjustment of the Iris to gain the optimal depth of field and light exposure. The lens suits perfectly to all super light sensitive cameras using large CMOS sensors of 1/1.8" size.
- 4K Resolution for super detailed images
